ABOUT US

What is Mechatronics at Iowa?

Mechatronics at Iowa is a new student organization at the University of Iowa, founded by a group of like-minded students with a passion for robotics. As an organization, we work together to create and develop robots to teach students about various engineering disciplines and develop their skill sets. We do this by competing against over 200+ other universities worldwide in the RoboMasters University League, as well as promoting outreach and education with various other local robotics teams and programs.

Our team is focused on collaboration, team building, innovation, and design. In this organization, members are able to build advanced technical skills through CAD and design workshops as well as learn to problem-solve at one of the highest-stakes competitions in robotics. Through this experience, our members gain first-hand, hands-on technical experience in robotics, CAD, electronics, manufacturing, and project design.

2 PLANNED COMPETITIONS

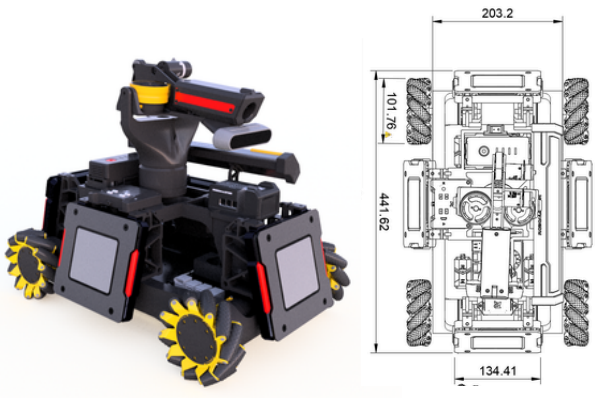

30+ NEW MEMBERS

MAKING 3 NEW ROBOTS

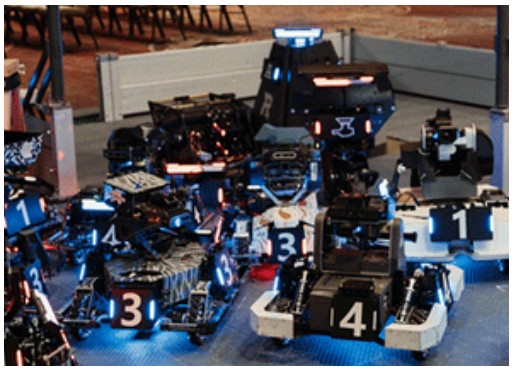

PROJECTS

RoboMaster/ARC

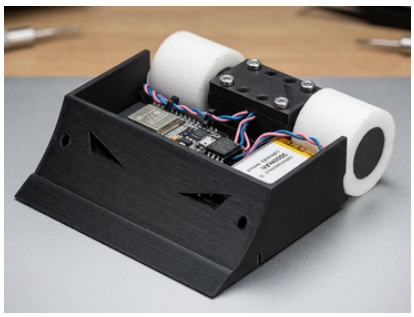

DJI's RoboMaster competition is known as the world's biggest and most complex university robotics competition. Similar to First Robotics competitions, RoboMaster is a high-intensity, head-to-head competition where each team builds a series of specialized robots to complete various different technical challenges and objectives while competing against another team.

The RoboMaster competition is a large international competition, and is rapidly growing in popularity in the US, with many top engineering schools having teams, including Georgia Tech, NYU, UW-Madison, Texas A&M, Purdue, Carnegie Mellon, Washington, and more.

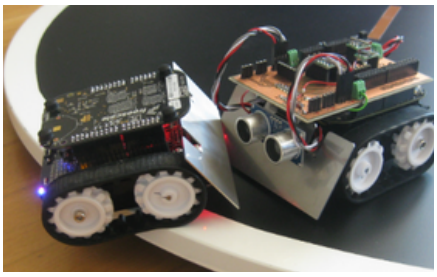

The competition features many different formats, including 1v1 and 7v7, but our team is aiming for is the 3v3 competition, where teams verse each other in a double-elimination bracket with 3 robots, all with different roles, competing in a head-to-head king-of-the-hill style battle against other universities.

Mini Sumo Competiton

Later in the fall semester, we plan on hosting a miniature robot competition for students to compete in, where each team will build a small scale pusher robot to compete against other bots in a 3-foot sumo ring.

We design a small scale starting kit to get students started without needing to build from the ground up themselves, and guide them throughout the entire design process. From designing parts in CAD, soldering electronics, and writing the code for their robot, we help the students gain valuable mechatronics knowledge and experience.

OUTREACH

First Robotics Teams

Our team hosts multiple opportunities throughout the year for members to help out their community and aspiring engineers.

We're planning trips to volunteer at local and regional First Robotics competitions, as well as opportunities to mentor local Iowa City robotics clubs and teams.

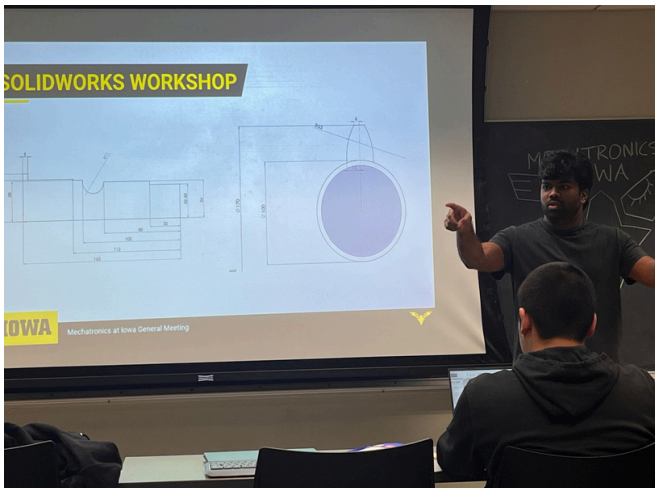

Thorough our mentorship and outreach, we hope to empower students interested in engineering. and cultivate STEM education.

Professional Development

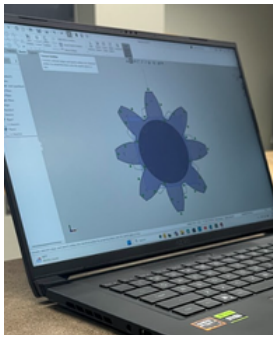

Throughout the year, we have held multiple workshop sessions dedicated to teaching students various software and tools related to mechatronics engineering, such as CAD, PCB Design, Programming, etc. We also invite industry professionals and researchers to come and share their experiences with us and tell us more about what their jobs are like, and how they got there.

The wide variety of skills we teach helps them engage in a variety of engineering disciplines and expands their skillset, giving them a competitive edge in the profesional workforce.

CAD DESIGN SOFTWARE FABRICATION ELECTRONICS

2026-2027 Planned Expenses

BUDGET

RoboMaster

Items	Price	Timeline	Description
Mechanical Hardware	$1000	Aug-Mar	Parts to build the frame and chassis of the robots
Electronics	$10,000	Nov-May	Motors, servos, ESCs, controllers, modules, etc.
Competition	$7,500	Jun	Registration costs, travel, and robot shipping

Mini Sumo

Items	Price	Timeline	Description
3D Printing	$300	Oct-Nov	Filament costs to print all robot shells
Electronics	$500	Oct-Nov	Motors, microcontrollers, batteries, PCBs, etc.
Event Hosting	$350	Oct-Nov	Food, advertising, and venue costs.

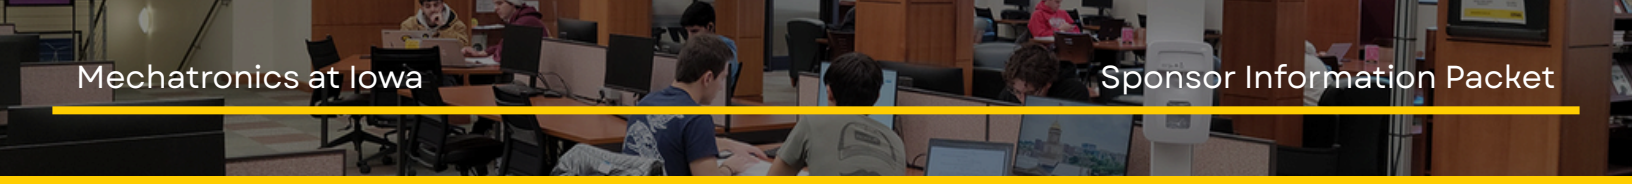

Outreach

Items	Price	Timeline	Description
Travel	$200	Nov-May	Traveling to schools, conferences, and competitions
Material Support	$200	Jan-May	Filament, raw material, manufacturing tools, etc.

Organizational Maintainance

Items	Price	Timeline	Description
Equipment	$2000	Aug-Jun	Tools used for machining, 3D printing, soldering, etc.
Branding	$300	Aug-Mar	Team shirts, banners, buisness cards, and decor
Advertising/Promotion	$100	Aug-Jun	Social media posts, team videos, flyers

Total Projected Expenses: $22,450

SPONSORSHIP TIERS

BRONZE: $100 - $499

- Logo on Website
- Logo on Team Shirt
- Signed Team Photo with the Robots
- End-of-Year Support Recap Letter

BLACK: $1000 - $2999

- Logo on Website
- Logo on Team Shirt
- Signed Team Photo with the Robots
- End-of-Year Support Recap Letter
- Logo on all Robots*
- Guided Workspace and Robot Tour
- Dedicated Social Media Spotlight Posts

SILVER: $500 - $999

- Logo on Website
- Logo on Team Shirt
- Signed Team Photo with the Robots
- End-of-Year Support Recap Letter
- Logo on a Robot*

GOLD: $3000+

- Priority Logo on Website
- Logo on Team Shirt
- Signed Team Photo with the Robots
- End-of-Year Support Recap Letter
- Priority Logo on all Robots*
- Guided Workspace and Robot Tour
- Company Logo Engraved into Robot Chassis
- Dedicated Social Media Spotlight Posts
- Robot Sticker Design Input

SUPPORT

How Does Your Support Help Us?

Monetary and in-kind donations support the next generation of engineers by giving them access to industry-leading technology and software in order to develop the technical and career skills needed for the future of the field. These sponsorships, grants, and donations allow our organization to purchase cutting-edge equipment and tools (shown below), needed to develop the future engineers of tomorrow.

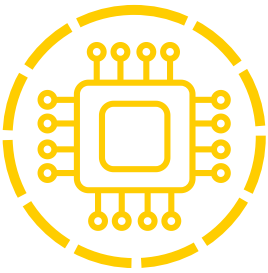

What Will Your Support Help Us Do?

Your support will help us fund the construction of our three competition robots, and will help to fund the following:

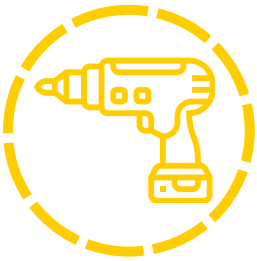

- Funds for Travel and Shipping to Competitions
- 3 Custom Robot Chassis
- Outreach and Education
- New Equipment and Tools for the Workshop
- NVIDIA Jetsons and Vision Processors
- Road Cases to Transport Robots to Competition
- 3D Printer(s) and Composite Filaments
- Custom-Designed PCBs

3D PRINTING

ELECTRONICS

POWER TOOLS

SOFTWARE

CUSTOM FABRICATION

THANK YOU!

Thank you for your consideration in supporting our organization and mission, and in supporting the future of engineering! If you would like to learn more or contribute, please feel free to reach out and talk to a team member.
